Upland while other 4 birds migrated outside Ordos Plateau in late September and early October. During migrating, the highest speed we recorded was 93.1 km per hour (Table 2). The activity of Demoiselle Crane in Ordos Plateau was divided into two stages. The cranes mainly roosted near Taolimiao-Alashan Lake and Houjia Lake in the first stage, and migrated outside Taolimiao-Alashan Lake and Houjia Lake until migrating outside of the Ordos Plateau in the second stage. In the first stage, breeders mainly roosted in Taolimiao-Alashan Lake and Houjia Lake, while non-breeders had a greater range of movement (Fig. 2). The time and migration routes of the four tracked Demoiselle Cranes migrating outside of the Ordos Plateau are little different (Fig. 3).S
